Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

- 6) ☐ Other: _____.

Non-Final Rejection

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

However, one of applicant's claim for priority under 35 U.S.C. 119(a)-(d) is based upon an application filed in Japan on 09/01/2001. A claim for priority under 35 U.S.C. 119(a)-(d) cannot be based on said application, since the United States application was filed more than twelve months thereafter.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipate by Komiyama (US 5,121,275).

With regard to claim 11, Komiyama et al shows a tape cassette including: an upper half 111 (Fig. 4) and a lower half 109 combined with each other, wherein the tape cassette is utilized for an apparatus that is provided with a light emitting, section for detecting a tape end of a magnetic tape, and a light receiving section for detecting the tape end of the magnetic tape by receiving a detection light beam irradiated by 'the light emitting section and detects a tape end such that the detection light beam irradiated by the light emitting section reaches the light receiving section in a level of luminous energy more than a predetermined luminous energy level, wherein at least

Art Unit: 2652

the upper half is made by a material having optical transparency (Column 4, lines 44-45), and wherein a hole 119 (Fig. 3, column 4, line 31) for a light path is formed on both sides of the tape cassette composed of the upper and lower halves so as to pass the detection light beam irradiated by the light emitting section to the light receiving section, and further wherein a protrusion 117d is formed on a upper outside of the hole for a light path so as to prevent undesired light other than the detection light beam in the predetermined luminous energy level from reaching the light receiving section (Column 4, lines 60-66).

With regard to claim 12, Komiyama further shows that one surface, which faces toward the lower half and is perpendicular to the side of the upper half, out of a plurality of surfaces constituting the protrusion is roughened (Column 2, lines 60-66).

Conclusion

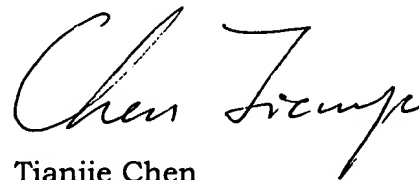

3. The prior art made of record in PTO-892 Form and not relied upon is considered pertinent to applicant's disclosure.
